

SERVICE OVERVIEW

Design. Development. Automation — twelve services in three phases.

LAUNCH

Websites, MVPs, and migrations — from concept to live

Landing Pages & Launch Sites

A production-ready page on your domain with a PageSpeed target of 90+, conversion tracking and source code you own.

MVPs & Product Prototypes

A live product with usage data, a stable demo environment and a codebase that can keep growing once demand is confirmed.

Website Workflows

Visitors deliver better information; routing and follow-up run on structured data instead of the inbox.

WordPress & Legacy Migrations

A faster, lower-maintenance website with a PageSpeed target of 90+, documented redirects and an editing route that fits the team.

OPERATE

Tools, portals, and platforms for daily operations

Internal Tools & Dashboards

An operations system replaces scattered admin surfaces and puts tasks, status, reporting and approvals in one place.

Client Portals & Business Applications

Customers, members or partners get one clear place for tasks, information, files and progress - the team keeps control in the backend.

Booking & Event Platforms

Attendees book without friction; your team runs capacity, communication, attendance and follow-up from one reliable admin view.

Custom Business Applications

A production-ready, observable application with documented core routines, tests for the agreed risks and a codebase that can be extended.

AUTOMATE

AI audit, company knowledge, and automation with review gates

AI Audit & Consulting

Your team gets a prototype you can check, a clear recommendation and the production plan for the smallest automation that pays off.

Company Brain Systems

A maintained operational memory that ties current answers to sources and makes gaps or uncertainty visible.

AI Workflow Automation

A production workflow with monitoring, error handling and defined human interventions; the impact is checked after launch against real processing times.

AI Agents with Review Gates

A faster, consistent workflow without black-box accountability: AI takes the recurring work, people keep the decisions.

Next sensible step

30 minutes. One workflow. A solid build plan.
