

OPERATE - BOOKING & EVENT PLATFORMS

The exception decides whether a booking system takes work off your team or creates new manual work.

Custom booking and event systems join registration, capacity, reminders, check-in, follow-up and admin work into one lifecycle.

WHERE VALUE IS LOST TODAY

01 Rules do not fit the standard tool

Locations, sessions, waitlists or eligibility are maintained outside the system.

02 Communication is manual

Confirmations, reminders and changes hang on lists and one-by-one sending.

03 Event day has no backend

Check-in, attendance and status are not connected to registration and reporting.

THE GOAL

Attendees book without friction; your team runs capacity, communication, attendance and follow-up from one reliable admin view.

FROM BOTTLENECK TO PRODUCTIVE SYSTEM

The whole lifecycle is modeled - from registration and capacity through check-in, follow-up and reporting. Rules and exceptions carry the most weight.

MAKE THE COMPLEXITY VISIBLE

Scope starts with rules and exceptions - not with the calendar

Multiple locations, event types, payments, CRM and communication are only taken in when the real process needs them.

WHAT THE BUILD DELIVERS

01

Booking or registration flow

02

Slots, capacity and waitlists

03

Attendee profiles and rules

04

Automatic emails and status updates

05

Check-in, reporting and integrations

THREE ROUTES - ONE DECISIVE DIFFERENCE

STANDARD BOOKING TOOL

Ready fast, as long as rules and edge cases stay simple.

MANUAL ADD-ONS

Flexible, but communication and data break into side processes.

WEBVISE

Direct ownership of lifecycle, admin, integrations and edge cases.

The system fits when event types, communication and integrations work together even in the exception.

THE THREE QUESTIONS BEFORE A GOOD DECISION

01

Can several event types or locations be represented?

Yes. Event types, locations, sessions, capacity rules and registration flows can be modeled to fit.

02

Can the system send reminders and follow-ups?

Yes. Confirmations, reminders, status updates, follow-ups and internal notifications can be built into the workflow.

03

Are payments and CRM sync possible?

Yes. Payment, CRM, email marketing, calendar, analytics and exports are planned as integrations.

NEXT SENSIBLE STEP

30 minutes. One workflow. A solid build plan.

We walk the lifecycle once end to end and mark every rule, exception and manual handover. That gives the smallest sensible platform scope.
