

LAUNCH - WEBSITE WORKFLOWS

The website should not just trigger work. It should already structure the next step.

Forms, qualification, routing, CRM handovers and review screens turn a content site into a reliable entry point to a business process.

WHERE VALUE IS LOST TODAY

01 Inquiries stay vague

The team has to follow up because forms do not capture the decisive information.

02 Handovers happen by hand

Data moves from emails into the CRM, spreadsheets or tickets - costing time and accuracy.

03 Conversion ends at the form

What happens after the submit is neither visible nor properly measurable.

THE GOAL

Visitors deliver better information; routing and follow-up run on structured data instead of the inbox.

FROM BOTTLENECK TO PRODUCTIVE SYSTEM

First we settle where the website triggers operational work. Then a workflow layer is added exactly there – without rebuilding the whole platform too early.

STEP BY STEP INSTEAD OF BIG BANG

The first workflow layer can start on your existing website

A portal, dashboard or full application follows only once the first production path proves the need.

WHAT THE BUILD DELIVERS

01

Workflow map and measurement plan

02

Intake, inquiry or application flow

03

Validation, routing and notifications

04

CRM sync and conversion reporting

05

Dashboard or admin review screen

THREE ROUTES - ONE DECISIVE DIFFERENCE

LANDING PAGE ONLY

Explains and converts, but does not structure the process that follows.

FULL REBUILD

Large scope before the most important workflow is proven.

WEBVISE

Direct ownership of UX, integration and measurement for one targeted workflow layer.

The right entry point settles system boundaries, integrations and the smallest production workflow.

THE THREE QUESTIONS BEFORE A GOOD DECISION

01

Is this not just a landing page?

No. The workflow collects structured data, passes it on and connects the entry point with business tools and a review screen.

02

Do we need a full application for this?

Not necessarily. The first useful product layer can start narrower on the existing website and grow later.

03

Can our CRM or analytics be connected?

Yes. CRM sync, analytics, notifications, admin views and automation rules are planned to fit the process.

NEXT SENSIBLE STEP

30 minutes. One workflow. A solid build plan.

We map the path from the first click to internal processing. After that it is clear which small workflow layer removes the biggest bottleneck.
